

2027-07-29 Laravel的基礎route(路由)應用

從routes/web.php新增路由

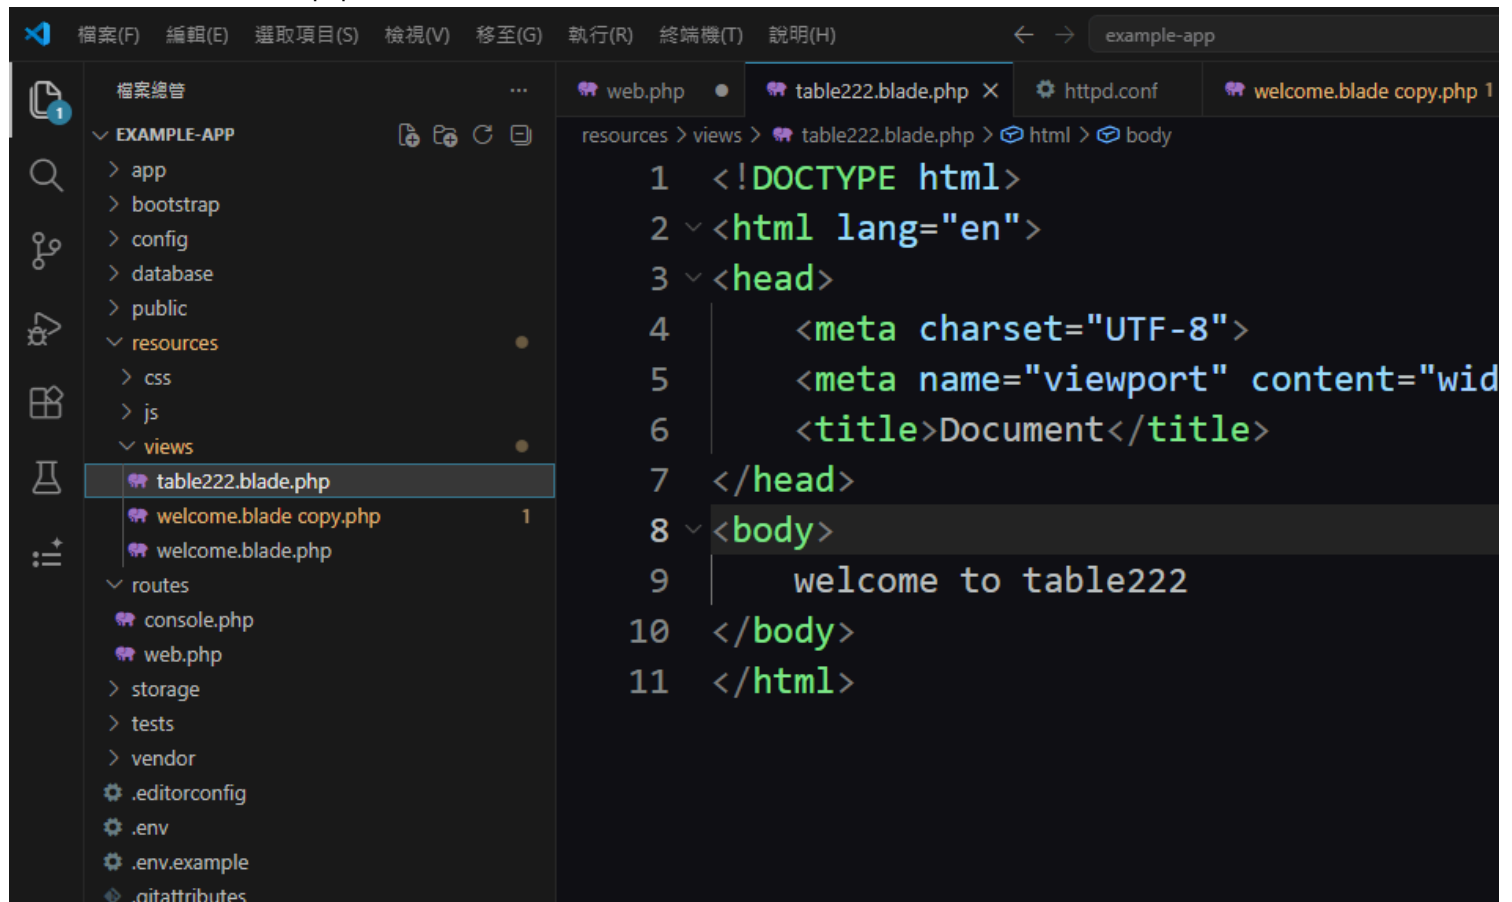

```
1 <?php
2
3 use Illuminate\Support\Facades\Route;
4
5 Route::get('/', function () {
6     return view('welcome');
7 });
8
```

先假設要走table222這個檔案

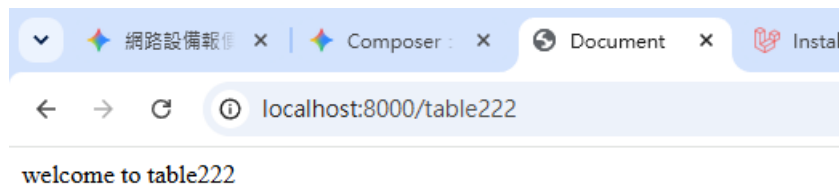

```
1 <?php
2
3 use Illuminate\Support\Facades\Route;
4
5 Route::get('/', function () {
6     return view('welcome');
7 });
8
9 Route::get('/table222', function () {
10     return view('table222');
11 });
```

新增檔案：table222.blade.php

網址填入 /table222

實作練習

dd() 會中斷

dump() 不會中斷

routes > web.php > Closure

```
14
15 // 這裡是填入想要設計的網址路徑
16 Route::get('/calculator', function () {
17     $data = [1, 2, 3];
18     $assocArr = [
19         [
20             'id' => 1,
21             'name' => 'amy',
22             'mobile' => '0911'
23         ],
24         [
25             'id' => 2,
26             'name' => 'bob',
27             'mobile' => '0922'
28         ],
29         [
30             'id' => 3,
31             'name' => 'cat',
32             'mobile' => '0933'
33         ]
34     ];
35
36     //dd() 會中斷
37     //dump() 不會中斷
38     dump($data);
39     dump($assocArr);
40
```
