Composer and all content on this site are released under the [MIT license](#).

Download Composer Latest: v2.10.2

 PRIVATE PACKAGIST
Secure & reliable package repository

Windows Installer

The installer - which requires that you have PHP already installed - will download Composer for you and set up your PATH environment variable so you can simply call `composer` from any directory.

Download and run [Composer-Setup.exe](#) - it will install the latest composer version whenever it is executed.

Command-line installation

To quickly install Composer in the current directory, run the following script in your terminal. To automate the installation, use [the guide on installing Composer programmatically](#).

```
php -r "copy('https://getcomposer.org/installer', 'composer-setup.php');"  
php -r "if (hash_file('sha384', 'composer-setup.php') === 'c8b085408188070d5f52b3cfe4c6fbee5f727afa458b2573b8ea2  
php composer-setup.php  
php -r "unlink('composer-setup.php');"
```

This installer script will simply check some `php.ini` settings, warn you if they are set incorrectly, and then download the latest `composer.phar` in the current directory. The 4 lines above will, in order:

- Download the installer to the current directory
- Verify the installer SHA-384, which you can also [cross-check here](#)
- Run the installer
- Remove the installer

The screenshot shows a Windows File Explorer window with the address bar displaying the path: 本機 > Phantossys (C:) > xampp > htdocs > laravel202607 > s2026073001. The file list is as follows:

7 // });
8
9 // localhost/num1/1000/num2/200
10 Route::get('/num1/{num1}/num2/{num2}', function ($num1, $num2) {
11     $result = $num1 + $num2;
12     $data = [
13         'num1' => $num1,
14         'num2' => $num2,
15         'result' => $result
16     ];
17     return view('sum')->with(['data' => $data]);
18 });
19
```

views

```
14 <div class="container mt-3">
15     <h2>Sum Table</h2>
16     <p>The .table class adds basic styling (light padding and horizontal lines)</p>
17     <table class="table">
18         <thead>
19             <tr>
20                 <th>Num1</th>
21                 <th>Num2</th>
22                 <th>Result</th>
23             </tr>
24         </thead>
25         <tbody>
26             <tr>
27                 <td><?= $data['num1']; ?></td>
28                 <td><?= $data['num2']; ?></td>
29                 <td><?= $data['result']; ?></td>
30             </tr>
31         <?php
32             // dd($data);
33             ?>
34
35         <!-- <tr>
36             <td>1000</td>
```

Sum Table

The .table class adds basic styling (light padding and horizontal dividers) to a table:

Num1	Num2	Result
10000	200	10200

php artisan make:controller UserController

php artisan make:controller HotelController

route web.php

HotelController

```
1 <?php
2
3 namespace App\Http\Controllers;
4
5 use Illuminate\Http\Request;
6
7 class HotelController extends Controller
8 {
9     public function index()
10     {
11         dd('Hello HotelController index');
12     }
13
14     public function hello()
15     {
16
17         dd('Hello HotelController hello');
18     }
19 }
```

1. 安裝?
2. route
3. controller
4. view
-?

懶人包

希望 有一天 你可以自己獨立做出來
