

index.blade.php 內 修改 記得 要更改變成 有變數的route

Actions Handled by Resource Controllers

Verb	URI	Action	Route Name
GET	/photos	index	photos.index
GET	/photos/create	create	photos.create
POST	/photos	store	photos.store
GET	/photos/{photo}	show	photos.show
GET	/photos/{photo}/edit	edit	photos.edit
PUT/PATCH	/photos/{photo}	update	photos.update
DELETE	/photos/{photo}	destroy	photos.destroy

helper

`route()`

The `route` function generates a URL for a given named route:

```
1 $url = route('route.name');
```

If the `route` accepts parameters, you may pass them as the second argument to the function:

```
1 $url = route('route.name', ['id' => 1]);
```

By default, the `route` function generates an absolute URL. If you wish to generate a relative URL, you may pass `false` as the third argument to the function:

```
1 $url = route('route.name', ['id' => 1], false);
```
